

Inspection of natural gas lines in your area

To Whom It May Concern:

SaskEnergy, and its subsidiary TransGas, take pride in providing safe and reliable service to our customers. Every year, as part of our enhanced safety and gas line integrity program, we routinely perform a variety of safety tests and inspections throughout different areas of the province. This includes surveying for natural gas leaks and visual inspections of utility right-of-ways.

To inspect our gas lines, we may utilize a variety of techniques that can include both vehicle-mounted equipment and hand-held devices. These highly sensitive instruments are designed to detect natural gas and will be used to survey above and below ground infrastructure. In the event that a natural gas leak is detected or other repairs to the system need to be made, SaskEnergy personnel will respond accordingly.

Inspection of the gas line system will take place in your area between **April and May, 2021**. This will be completed by a SaskEnergy or a qualified Field Representative who has been contracted to complete this work on our behalf. Field Representatives will wear hi-visibility clothing, travel in marked vehicles, and will carry identification indicating they work for or on behalf of SaskEnergy.

Please note that residents will not be notified prior to the specific inspection date. There is no action required by the home / landowner, and no direct contact needed during the inspection.

While surveys are an integral part of SaskEnergy's annual safety program, all natural gas in SaskEnergy's distribution system is odourized as an additional safety feature. If you suspect the smell of natural gas, please call SaskEnergy's 24-hour emergency service line immediately at **1-888-7000-GAS (427)**.

Information regarding SaskEnergy's enhanced safety and gas line integrity program is available by visiting saskenergy.com. A list of most frequently asked questions are included on the back of this letter for your reference.

Thank you for your cooperation. We appreciate your support of this important safety initiative. If you have any further questions, please feel free to contact me directly.

Sincerely,

Jesse Miller, Engineer-in-Training
System Integrity & Standards
Ph. 306-777-9045
Email: jmiller@saskenergy.com

For your safety, Mercaptan, an odourant, is added to the natural gas in SaskEnergy's distribution system, making it easier to smell and detect.

If you suspect the smell of natural gas, please leave the area immediately and call SaskEnergy's 24 hour emergency service line at **1-888-7000-GAS (427)**.

If you require more information, or have any questions, please contact us at 1-800-567-8899, or at saskenergy.com.

We're inspecting natural gas lines.

What does that mean for you?

What are we doing?

Every year, as part of our proactive safety and natural gas system integrity program, SaskEnergy routinely performs a variety of safety tests and inspections throughout the province.

This includes:

- Surveying** for natural gas leaks.
- Visually inspecting** utility easements.
- Testing** cathodic protection systems.

Why inspect?

These tests and inspections allow us to provide safe, reliable service to our customers, and to meet strict regulatory requirements. We use a variety of techniques that can include vehicle-mounted equipment and hand-held devices. These highly sensitive instruments are designed to detect natural gas and are used to survey above and below ground infrastructure.

There is currently no notification to customers about these inspections due to variabilities of the survey, which can include:

- **Weather conditions**
- **Crop maturity**
- **Work force availability**
- **Changing risk levels**

1 Testing the natural gas lines on your property.

SaskEnergy inspects approximately 20,000 kilometers of natural gas lines annually to detect natural gas leaks and inspect utility easements. We also inspect the anti-corrosion system called cathodic protection for about 80,000 services every year. Cathodic protection is applied to the below-ground portion of the steel gas line leading to your property and does not directly affect natural gas service.

Customer support and co-operation for this safety initiative is appreciated.

2 Who will be doing the testing?

Surveying and testing will be completed by SaskEnergy, or a qualified Field Representative who has been contracted to complete this work on our behalf. Field Representatives will carry identification indicating they work for, or on behalf, of SaskEnergy.

3 There is no need for concern.

Inspections occur year round at least once every 5 years, and are a part of SaskEnergy's planned, preventative maintenance program. If any repairs or additional work is required as a result of an inspection, SaskEnergy personnel will promptly resolve the issue or be in contact with you as required.

4 What if you're not a customer?

Even if you are not a SaskEnergy customer, you may still have a utility easement or natural gas line on your property that delivers service to a neighbouring property. Identifying who is a customer can be a challenge for a Field Representative.

We continue to improve our processes and technology so we can try to alleviate this issue in the future.
